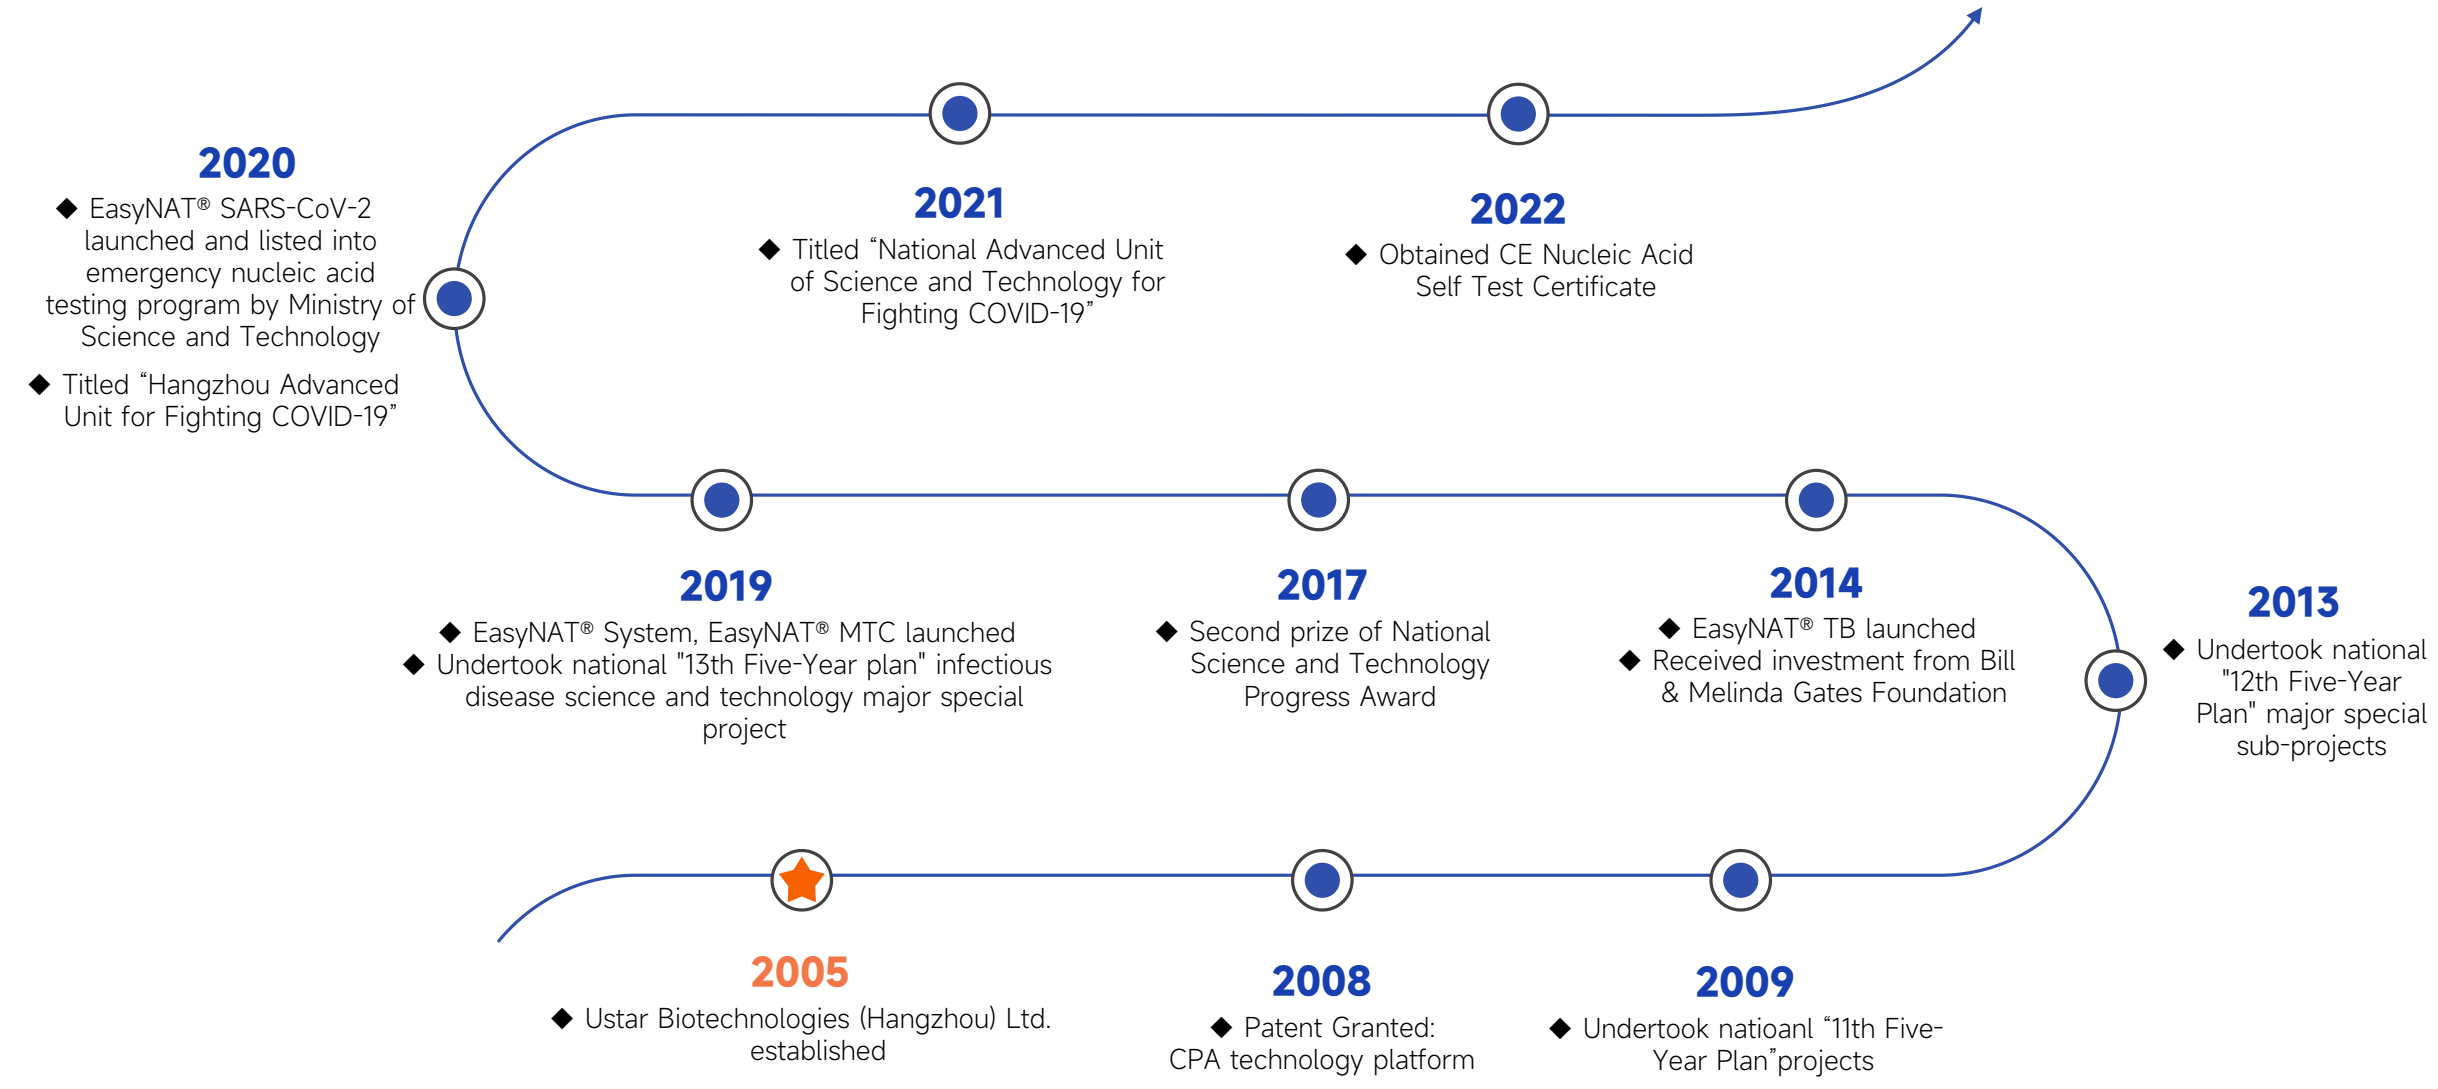
About Ustar

USTAR, founded in 2005, is a leading point-of-care molecular diagnosis provider for tuberculosis, COVID-19, malaria and other major communicable diseases.

Our vision and mission is:

Molecular Testing, Anywhere!

Milestone



2020
◆ EasyNAT® SARS-CoV-2 launched and listed into emergency nucleic acid testing program by Ministry of Science and Technology
◆ Titled “Hangzhou Advanced Unit for Fighting COVID-19”
2021
◆ Titled “National Advanced Unit of Science and Technology for Fighting COVID-19”
2022
◆ Obtained CE Nucleic Acid Self Test Certificate
2013
◆ Undertook national "12th Five-Year Plan" major special sub-projects
2014
◆ EasyNAT® TB launched
◆ Received investment from Bill & Melinda Gates Foundation
2017
◆ Second prize of National Science and Technology Progress Award
2019
◆ EasyNAT® System, EasyNAT® MTC launched
◆ Undertook national "13th Five-Year plan" infectious disease science and technology major special project
2005
◆ Ustar Biotechnologies (Hangzhou) Ltd. established
2008
◆ Patent Granted: CPA technology platform
2009
◆ Undertook natioanl “11th Five-Year Plan”projects

Dear Sir,

re: Authorization to perform PCR tests to identify SARS-CoV-2 virus by the Sample-Result – EasyNAT rapid device

Reference: Device Validation Tests Report, accompanying documents for the device

On the basis of the good results of the validation tests performed by the laboratory under your responsibility, including the test results by the EasyNAT device compared with the PCR test results on the basis of nucleic acids and running in the PCR device (using the Thermo kit), and, in addition, performance test results comparison by the EasyNAT device with the test results of the Genexpert – sample-to-result rapid device, we approve use of the EasyNAT device to undertake the tests.

The approval is valid from the date of this letter.

Make sure to undertake outside quality tests as part of the routine.

Sincerely,
[signature]

VIRNOSTICA

DIAGNOSTIC KIT FOR NOVEL-CORONAVIRUS (2019-NCOV) RNA (ISOTHERMAL AMPLIFICATION-REAL TIME FLUORESCENCE ASSAY) FROM USTAR TECHNOLOGIES. TEST REPORT VALIDATION IN RESPIRATORY SPECIMENS.

Report responsible: Rubén González Sanz (scientific manager).

Pages: 3

Purpose.
To validate the Diagnostic Kit for Novel-Coronavirus (2019-nCoV) RNA (Isothermal Amplification-Real Time Fluorescence Assay) from USTAR TECHNOLOGIES for the qualitative detection of SARS-CoV-2 nucleic acids from oropharyngeal specimens.

Methodology.
The diagnostic kit to detect the novel coronavirus (2019-nCoV) was tested with 40 anonymized respiratory samples from the National Center for Microbiology (CNM). Samples were collected with oropharyngeal swabs and shipped in a virus transport medium. The samples used with the kit under evaluation were previously inactivated at 56°C for 30 minutes and further tested in parallel with the reference real-time PCR developed and optimized in the CNM according to methods recommended by the WHO (1). The sample panel included 30 positive specimens and 10 negative specimens. Ten specimens with Ct values <20, 10 specimens with Ct values between 20 and 30, and 10 specimens with Ct values >30 were selected for the study.
The Diagnostic Kit for Novel-Coronavirus (2019-nCoV) RNA (Isothermal Amplification-Real Time Fluorescence Assay) from USTAR TECHNOLOGIES consists of the amplification of two regions of the SARS-CoV-2 genome (ORF1ab gene and N gene). This amplification is performed by an isothermal reaction called "Cross Priming Amplification" in which specific primers and specific fluorescent probes are used. The fluorescence signal is detected by the applicable instrument and a fluorescence curve in real-time is generated. In addition, the kit incorporates the detection of an internal reaction control (GAPDH gene).
The nucleic acid extracts were amplified in a CFX96 thermocycler (BIORAD) adjusting the detection limit to 100 relative fluorescence units (RFU). Results interpretation was carried out according to the manufacturer´s recommendations, and specimens that generated a sigmoidal curve with a Ct value <38 were informed as positive.
Results.
The following results were obtained using lot 20210622 with the date of expiry 21/12/2021 of the Diagnostic Kit for Novel-Coronavirus (2019-nCoV) RNA (Isothermal Amplification-Real Time Fluorescence Assay) from USTAR TECHNOLOGIES. All positive samples tested with the reference method were also positive with the evaluated kit (Table 1) reaching a sensitivity of 100%. The observed specificity was 100% since none of the 10 negative specimens tested generated a false-positive result.

Conclusions.
The diagnostic kit evaluated from USTAR TECHNOLOGIES showed 100% sensitivity and specificity detecting the novel coronavirus SARS-CoV-2 in oropharyngeal specimens.

US Cabell Huntington Hospital

Accuracy - 100%

Cabell Huntington Hospital Laboratory

1340 Hal Greer Blvd. Huntington, WV 25701

Date: 04/21/2020

Purpose: Addition of Ustar Biotechnologies' 2019-nCoV RNA Assay.

Testing: Multiple technologists ran our validation during the day. The same COVID order will be used in the LIS as is currently being used for other covid testing.

Technologists ran 20 positive and 20 negative controls for the 2019-nCoV assay for nine consecutive days. The technologists also repeated 10 previous positive specimens that were provided by WV State Laboratory and 10 previous negative patients that were tested on the other in-house test or by one of the reference laboratory test sites. These results were compared to results on the Ustar instrument and all results proved accurate to the originals. This was repeated for nine days.

A second Ustar instrument was validated as well. The same technologists ran validations for this instrument. A total of 10 positive and 10 negative controls were run on this analyzer as well as 5 previous positive specimens that were provided by WV State Laboratory and 5 previous negative patients that were tested on the other in-house test or by one of the reference laboratory test sites.

Results: All testing went as expected. The Ustar instruments accurately detected all 2019-nCoV RNA in QC samples as well as expected results from patient samples. There are no expected issues in going live with this new test and instrument.

Conclusion: The Ustar Biotechnologies' instrument has been fully validated for RUO purposes with plans to immediately submit for EUA approval by the FDA. We feel confident that this system is working correctly and are ready to go live with this instrument 4/21/2020.

Report on Study of USTAR SARS-CoV-2 (COVID-19) Diagnostic Test Kit

Summary

This document sets out the preliminary assessment of the Ustar SARS-CoV-2 diagnostic kit for the detection of SARS-CoV-2 RNA in human nose and throat swabs. 15 samples were collected from recently diagnosed patients and 10 negative samples were included in the evaluation. The Ustar SARS-CoV-2 RNA test gave a specificity of 100% and sensitivity of 100% versus current laboratory RNA testing. The manufacturer reports a limit of detection of 1000 copies/ml though this report determined a more sensitive limit of detection of 500 copies/ml.

EasyNAT MTC assay: A simple, rapid, and low-cost cross-priming amplification method for the detection of mycobacterium tuberculosis suitable for point-of-care testing

Zhuman Zhang, Jian Du, Tao Liu, Fen Wang, Junnan Jia, Lingling Dong, Liping Zhao, Yi Xue, Guanglu Jiang, Xia Yu & Hairong Huang

Figure 1. Cutaway view of the cartridge (sketch map) and equipment.

been developed as a TB diagnosis tool [10,11]. However, EasyNAT TB IAD requires many manual processing steps, which limits its use in clinical laboratories with heavy workloads. To solve this problem, Ustar Biotechnologies developed the EasyNAT MTC assay, which is also based on CPA but targets insertion sequence Is6110. The assay uses preloaded reagents in a single cartridge that accommodates DNA extraction, DNA purification, and target gene amplification and detection using three separate chambers within the same cartridge (Figure 1). FAM dye-labeled probes were used to detect the amplification products. Since equipment compatible with EasyNAT has also been developed, the total cost is less than half that of the Xpert assay, and the whole procedure takes less than two hours. Furthermore, this second-generation test uses glassified enzyme so that the cartridge can be con-

by the Ethics Committee of the Beijing Chest Hospital, Capital Medical University. Since all the samples used were leftover specimens from routine clinical examinations, written informed consent of the patients was waived.

Patient diagnosis and categorization

The enrolled patients were diagnosed according to the composite reference standard (CRS), which comprises clinical findings, laboratory outcomes, radiological imaging, and follow-up data. Patient categories were defined according to the following criteria: (1) Confirmed TB: smear-positive and/or culture-positive, i.e. MTB was identified. Some patients initially had negative smear and culture outcomes in this study, but their succeeding examinations produced

Clinical Evaluation: Children Gastric Aspirate

	Sensitivity, % (n/N)		Specificity, % (n/N)	
	EasyNAT	Xpert	EasyNAT	Xpert
All enrolled children	22.6 (31/137)	26.3 (36/137)	98.0 (100/102)	99.0 (101/102)
Bacteriologically confirmed	60.0 (9/15)	60.0 (9/15)		
Probable TB	18.0 (22/122)	22.1 (27/122)		

“EasyNAT may therefore be useful as a suitable alternative method of childhood TB diagnosis based on its cost-effectiveness, speed, and accuracy.”

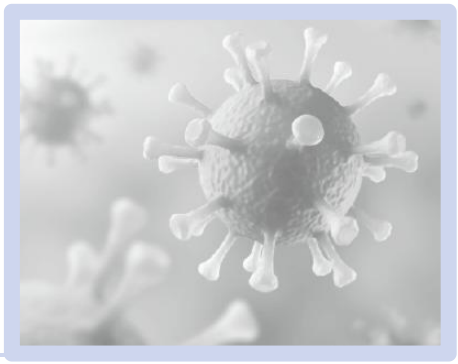
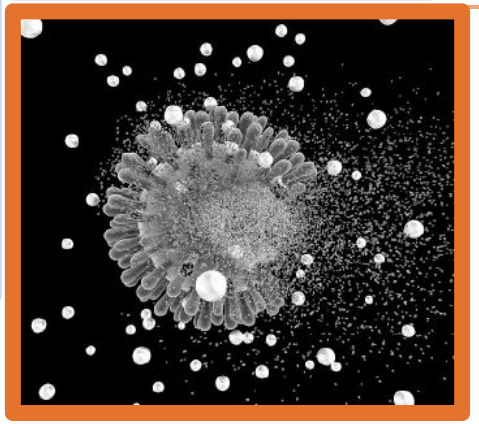
Pathogen Infection

- RTI panel
- STI panel
- Meningitis panel
- Gastrointestinal panel
- BCID panel





Medication Guidance

- MTC/MDR
- MTC/XDR
- Carba-R
- MRSA/SA
- Warfarin Gene Polymorphism
- *H. pylori* resistance

Genotyping

- NTM
- HPV
- HIV

Viral Load Testing

- *Epstein-Barr virus*
- HIV
- HBV
- HCV

MultNAT® Carba-R and Four Pathogens PCR Assay (RUO)

Mod	Target	Fluorescent channel	Sensitivity			
A	OXA	FAM	OXA-48 (*K.pneumoniae*)	100 CFU/mL	OXA-48 (*E.Coli*)	50CFU/mL
	KPC	HEX	KPC-3 (*K.pneumoniae*)	50CFU/mL	KPC-4 (*K.pneumoniae*)	100CFU/mL
	VIM	ROX	VIM-4 (*E.Coli*)	50CFU/mL	VIM-1 (*K.pneumoniae*)	50CFU/mL
B	IMP	FAM	IMP-1 (*E.Coli*)	50CFU/mL	IMP-2 (*P.aeruginosa*)	100CFU/mL
C	NDM	FAM	NDM-1 (*K.pneumoniae*)	200CFU/mL	NDM-2 (*A.baumannii*)	50 CFU/mL
	K.pneumoniae	HEX	400 CFU/mL		/	
	A.baumannii	ROX	400 CFU/mL		/	
D	*P.aeruginosa*	FAM	400 CFU/mL		/	
	E.Coli	ROX	400 CFU/mL		/	

MultNAT® Carba-R and Four Pathogens PCR Assay (RUO)

Cpmpare with PCR (Xpert)

Target	Template	Test concentration CFU/mL	MultNAT/Ct	Xpert/Ct
OXA	**OXA-48 (*K.pneumoniae*)**	1	N/A	N/A
		10	N/A	N/A
		100	37.7	37.6
IMP	**IMP-1 (*E.Coli*)**	10	N/A	N/A
		100	33.9	39.0
		1000	30.8	33.3
KPC	**KPC-4 (*K.pneumoniae*)**	10	N/A	N/A
		100	35.9	36.7
		1000	30.8	29.6
VIM	**VIM-1 (*K.pneumoniae*)**	10	36.0	N/A
		100	36.5	37.6
		1000	31.9	30.4
NDM	**NDM-2 (*A.baumannii*)**	10	N/A	N/A
		100	36.0	37.0
		1000	34.6	37.7

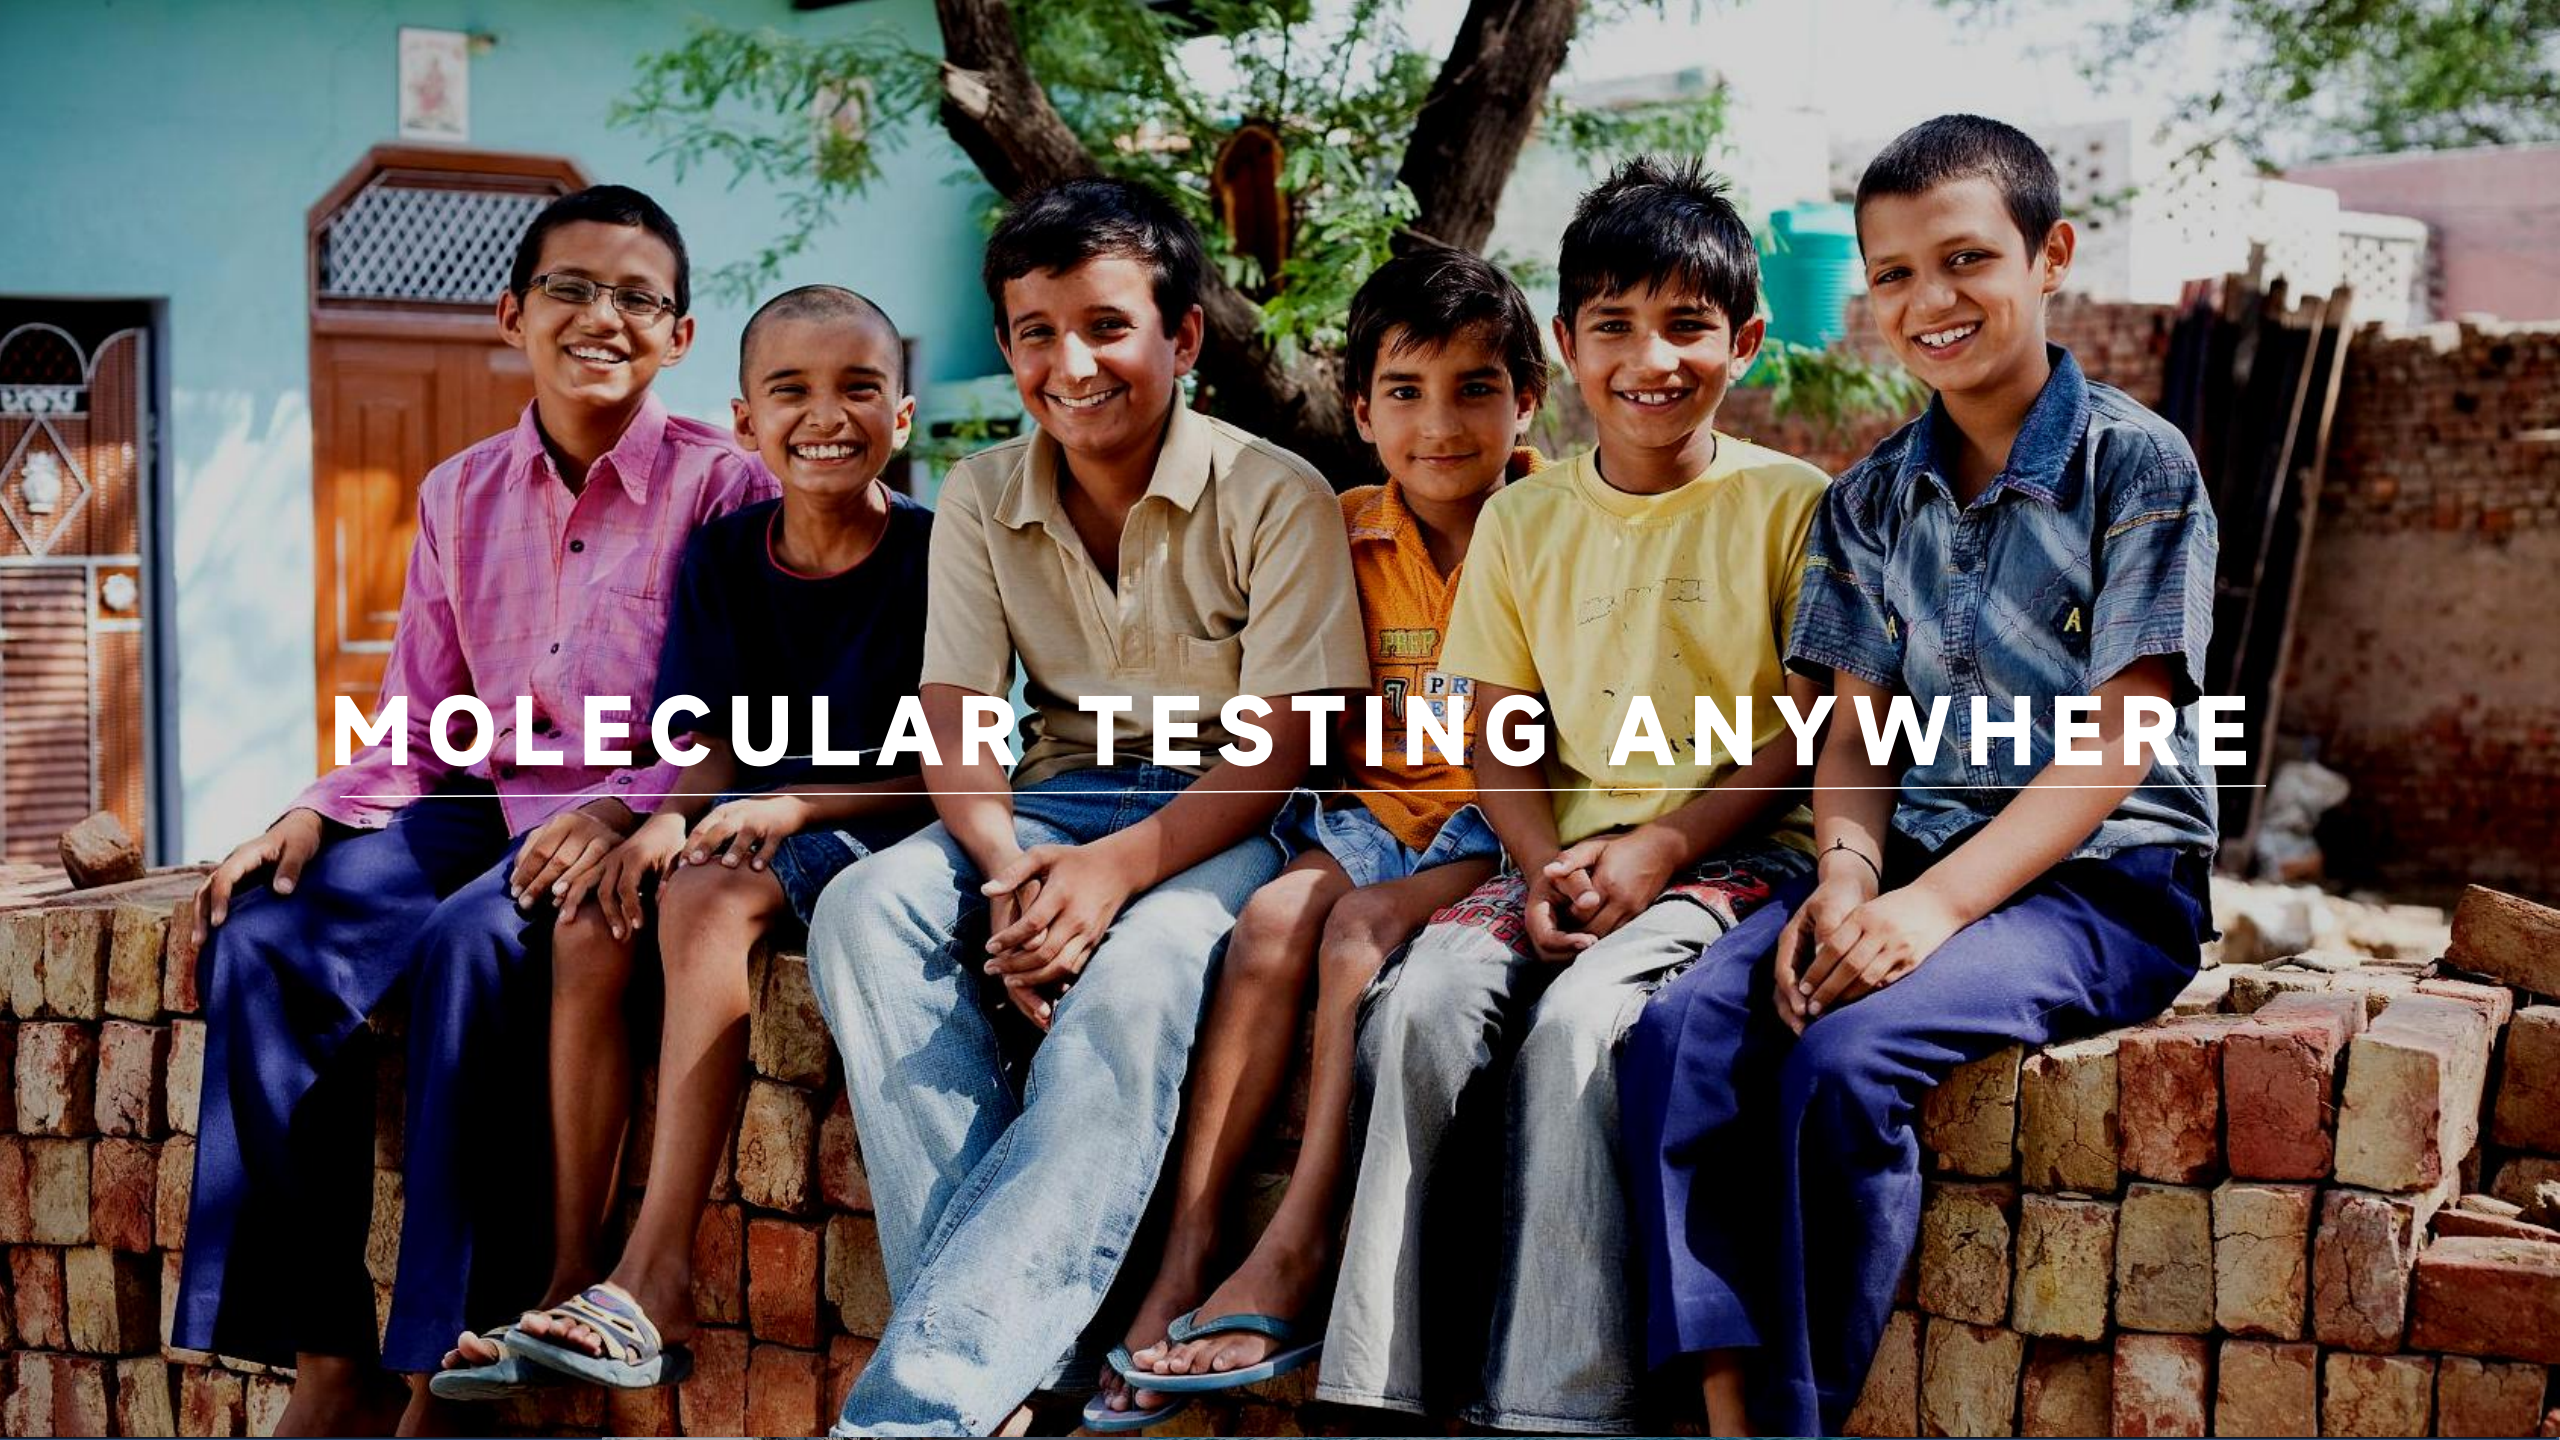
MultNAT® Gastrointestinal Panel (RUO)

Mod	Pathogens	Fluorescent channel	Sensitivity (cps/mL)
A	Salmonella	HEX	100
	Campylobacter	CY5	1000
	E.Coli O157	FAM	1000
B	*Y. enterocolitica*	HEX	30
	C. difficile (Toxins A/B)	CY5	1000
	Enterotoxigenic E. coli (ETEC)	FAM	5000
C	Shiga Toxin-Producing Escherichia coli (STEC)	HEX	300
	Shigella Castellani (plus EIEC)	CY5	100
	Vibrio (*V.cholerae*, *V.parahaemolyticus*, *V.vulnificus*)	FAM	100
D (Virus)	Adenovirus 40/41	HEX	1000
	Rotavirus	CY5	100
	Norovirus GI/GII	FAM	1000

Internal control is at β-actin, ROX channel

Highlights

- **12 pathogens tested in ONE cartridge**
- **Less interference**
- **Higher specificity & sensitivity**



MOLECULAR TESTING ANYWHERE

THANKS
